

Denis prepares to load his trike

## Apologies

*from the Editor*

May I express my apologies to all members for being unable to produce a Triker News for the past couple of months.

Apart from my day job and commitments as an instructor, my duties as National HGFA Secretary with three Board meetings in three months have made it difficult to find time to produce a newsletter.

I am hoping that I will be able to resume a more regular schedule over the coming months.

## Is this the Ultimate Tourer?

Denis and Sheila get ready to press the power button on the electric winch

Notice the ingeniously designed trike carrier platform and angled ramp which is used to load the trike high and forward in the trailer.

The reason the trike is loaded high and forward on its platform is to allow access for the Suzuki 4WD which is also loaded and carried in the trailer. The trike is lifted high enough to clear the bonnet of the little Suzi. Denis uses a solar-powered electric winch to load the trike on the angled rails.

All ready to load the Suzuki behind and with the bonnet slightly under the trike.

A unique home away from home all ready for the road.

Denis is the perfect host with two external taps on the beer fridge for "Super" and "Standard".

The view from the rocker-recliner lounge chairs. TV, CD and DVD player and recorder are within easy reach. The main door and stairs to the top can be seen on the left.
